

Holothuria scabra - EFATE-SOUTH_2013-06

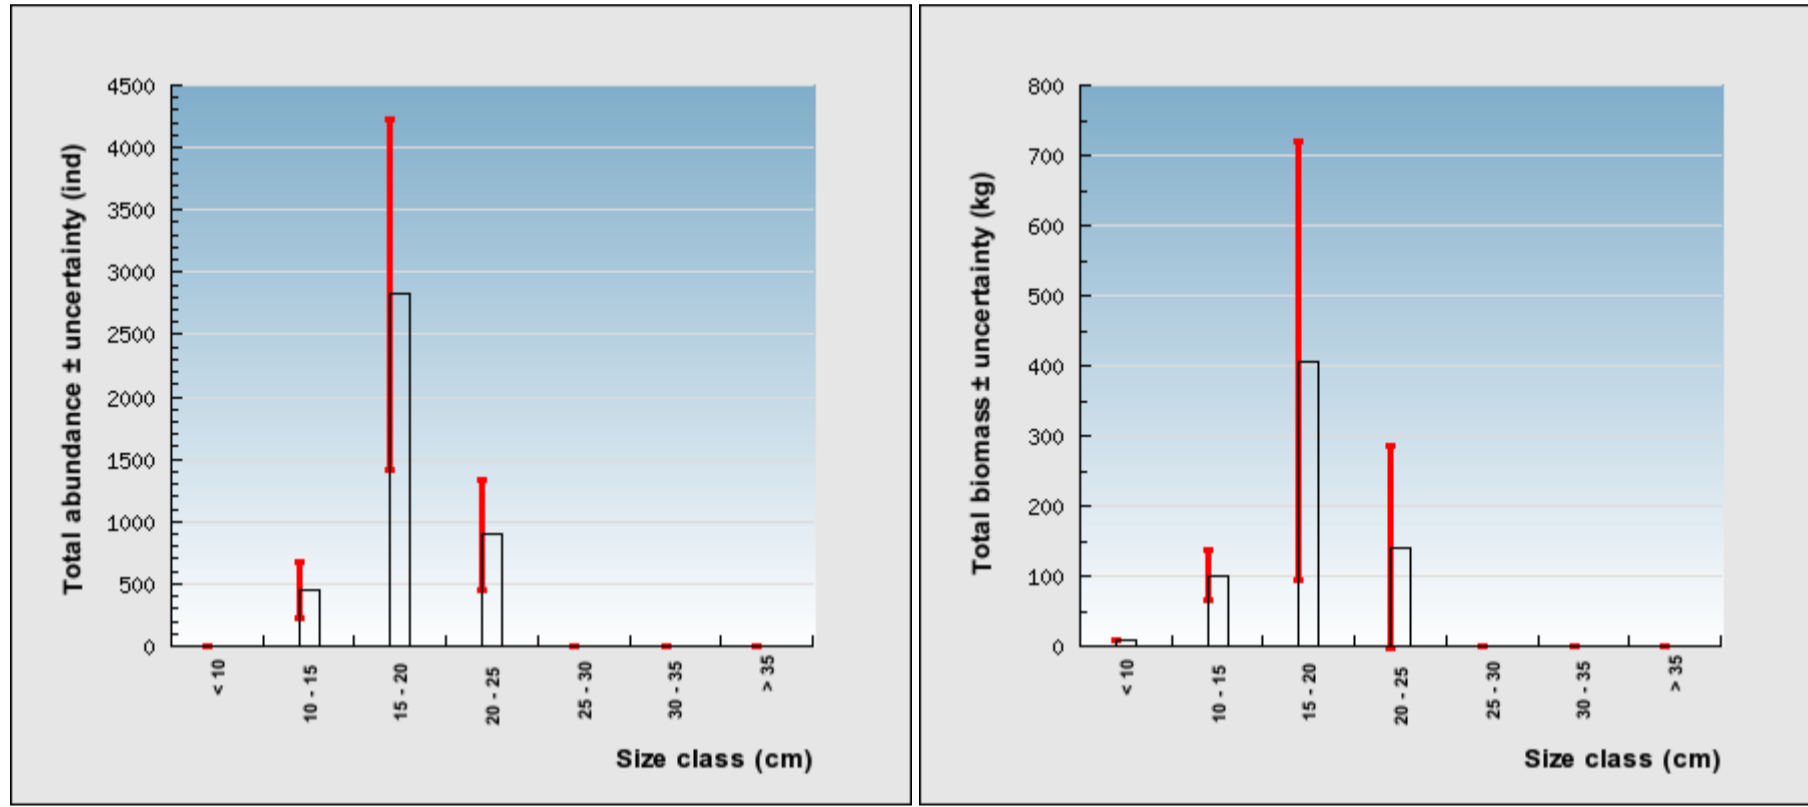

The selected data includes **8 habitat zone(s)** of the study area (**0.72 km²**). The field census occurred from 03/06/2013 to 13/06/2013. **19 transects** are considered in the results below.

Zones : Z003 ; Z013 ; Z043 ; Z044 ; Z055 ; Z066 ; Z067 ; Z068 ;
Outlying transects (removed from analysis) : T069;

There are too few transects in the selected zones to accurately calculate estimate uncertainty due to the heterogeneous spatial distribution of the resources over the study site. It is therefore suggested to perform the statistical analysis using a larger sample size, i.e., including more habitat zones.

Assessment results are available in the CSV files. Great care should be taken to avoid misinterpretation given the above statistical issue.

Size structure of the whole stock of Holothuria scabra

Size distribution of observed sea cucumbers (n=19)
